All the books mentioned in the above download links are digitally published and available for free reading online. Download your free copy today! Add a book to your catalogue, view recent additions and download your free pdf file for free from Scribd. Manage My Booklist It is our mission to add local authors and small businesses to Booklist.com. We have over one million titles on our site, including some great local authors and small businesses. If you are a local author or business, let us know about it.Q: How to find appropriate string query? How to find appropriate string query to edit next string "stringValue" in table schema. "Find next stringValue or replace with stringValue" This is schema: public final class Diagram { private String stringValue; ... Update i am working on Diagram.class. public Diagram(String stringValue) { this.stringValue = stringValue; } A: If your String value is a constant or a constant value, you can use regex. Consider a string like String str = "This is a string"; and you want to find the first occurrence of the string between This and is, the Regular Expression would be: Pattern p = Pattern.compile("(This(.\*?)is)"); Matcher m = p.matcher(str); if (m.find()) { // replace value System.out.println("String found"); } and the output would be String found If the String value of your diagram can change dynamically, you should use a Pattern and do a string find/replace. This will also allow the algorithm to match the pattern if you want to find multiple stringValue, or to replace it or the other way around. Pattern p = Pattern.compile("stringValue"); Matcher m = p.matcher(str); if (m.find()) { // replace value System.out.println("String found"); } else { System.out.println("String NOT found"); } 570a42141b
